

ALLEN Mouse Brain Atlas

ACKNOWLEDGEMENTS

The Allen Institute for Brain Science is extremely grateful to all whose contributions of advice, guidance, reagents and other support helped to facilitate the development and enhance the value of the Allen Mouse Brain Atlas for the scientific community. The Institute would like to recognize and thank the following contributors for their generosity and support of the project:

David Anderson, California Institute of Technology, for his contributions on the Scientific Advisory Board.

Atlassian, for unlimited non-profit licenses for use of Confluence, JIRA and Crowd (<http://www.atlassian.com>).

Doug Bowden, University of Washington, for consultation on ontologies and anatomic frameworks.

Greg Cox, Molecular Probes, Inc., now part of Invitrogen Corporation, for fluorescent probe consultation.

Miles G. Cunningham, Harvard Medical School's McLean Hospital, for collaboration on improvements to tissue preparation prior to sectioning.

Catherine Dulac, Harvard University, for her contributions on the Scientific Advisory Board.

Gregor Eichele, Max Planck Institute for Biophysical Chemistry, for his contributions on the Scientific Advisory Board and for assistance in implementing the *in situ* hybridization platform.

Vance Faber, Vanco Research, private consultant in image compression algorithms and JPEG2000 file format.

Bernd Fischer & Stefan Wirtz, University of Lübeck, for consultation in image registration techniques.

James Gee, University of Pennsylvania, for partnership in image registration technology and informatics of reference atlas construction.

Richard Gibbs, Baylor College of Medicine, for his contributions on the Scientific Advisory Board.

Jim Gray, Microsoft Research, for consulting in large scale database technology.

Yoshihide Hayashizaki, RIKEN Genomic Sciences Center, RIKEN Yokohama Institute, for providing the FANTOM3 clone collection (<http://fantom3.gsc.riken.jp/>) of the FANTOM Consortium.

David Haynor, University of Washington, general consultant in informatics and image processing architecture.

John Hogenesch & John Walker, Genomics Institute of the Novartis Research Foundation, for providing microarray data for gene selection.

Jason Inman & Mike Brownstein, National Institute of Mental Health, for providing MGC clones (<http://mgc.nci.nih.gov/>).

Satoshi Minoshima, Norman J. Beauchamp, Kenneth Maravilla, Donna Cross & Jennifer Flexman, University of Washington Departments of Radiology and Bioengineering, for contributing MRI data toward process improvements in the areas of tissue preparation prior to sectioning and registration of the reference atlas.

Steven M. Paul, Weill Cornell Medical College, for his contributions on the Scientific Advisory Board.

Mimi Roque-Biewer, David Ruff & Alexa Fuller, Applied Biosystems, for providing RNA extraction expertise, Taqman assays, reaction, and data analysis on the collaborative Taqman Validation Project.

Charles W. Scouten, MyNeuroLab, for collaboration on improvements to tissue preparation prior to sectioning.

Larry Swanson & Mihail Botha, University of Southern California, for Atlas ontology.

Joseph S. Takahashi, University of Texas Southwestern Medical Center, for his contributions on the Scientific Advisory Board.

Marc Tessier-Lavigne, Rockefeller University, for his contributions on our Scientific Advisory Board.

Christina Thaller, Baylor College of Medicine, for *in situ* hybridization data and brain sections.

Art Toga, University of California Los Angeles Medical Center, for his contributions on our Scientific Advisory Board.

Joe Warren, Rice University, for consultation in algorithms and architecture.
