

Allen Cell Types Database

ACKNOWLEDGEMENTS

The Allen Institute for Brain Science gratefully acknowledges the following contributors for their expertise and generous assistance with the creation of the Allen Cell Types Database.

FUNDING

We wish to thank the Allen Institute founders, Paul G. Allen and Jody Allen, for their vision, encouragement and support.

Some of the data generation and processing of the anterior lateral motor area (ALM) and lateral geniculate complex (LGd) single cell transcriptomics data was supported by award number U01MH105982 from the National Institute of Mental Health and Eunice Kennedy Shriver National Institute of Child Health & Human Development. Its contents are solely the responsibility of the authors and do not necessarily represent the official views of National Institute of Mental Health and the National Institutes of Health.

COLLABORATORS AND OTHER CONTRIBUTORS

Silvia Arber, Ph.D., Friedrich Miescher Institute, for providing the Pvalb-IRES-Cre mice via The Jackson Laboratory.

Blue Brain Project. The biophysical models with active dendrite conductances were developed in the context of a collaboration between the Allen Institute for Brain Science and the Blue Brain Project (<http://bluebrain.epfl.ch>). The Blue Brain Project contributed expertise, whole cell patch-clamp stimulation protocols, supercomputing time, data-driven modeling pipelines, source code for optimizing biophysical neuronal models, execution of optimizations, morphological analysis source code and quality control tests. Specific contributors from the Blue Brain Project and its collaborators are listed below:

- **Henry Markram, Ph.D.**, Blue Brain Project, École Polytechnique Fédérale de Lausanne (EPFL), Switzerland, for consultation about optimization outcomes for biophysical modeling – all active.
- **Sean Hill, Ph.D.**, Blue Brain Project, École Polytechnique Fédérale de Lausanne (EPFL), Switzerland, for advising on biophysical modeling – all active.
- **Eilif Muller, Ph.D.**, Blue Brain Project, École Polytechnique Fédérale de Lausanne (EPFL), Switzerland, for consultations about optimization outcomes and contributions to morphology analyses for biophysical modeling – all active.
- **Etay Hay, Ph.D.**, The Hebrew University of Jerusalem, for providing code for optimization of biophysical neuronal models and advising on its application.
- **Shaul Druckmann, Ph.D.**, The Hebrew University of Jerusalem, for providing code for optimization of biophysical neuronal models and advising on its application.

- **Guy Atenekeng Kahou, Ph.D.**, Blue Brain Project, École Polytechnique Fédérale de Lausanne (EPFL), Switzerland, for contributions to the single-neuron morphology analyses for biophysical modeling – all active.
- **Lida Kanari**, Blue Brain Project, École Polytechnique Fédérale de Lausanne (EPFL), Switzerland, for contributions to the single-neuron morphology analyses for biophysical modeling – all active.
- **Christian Rossert, Ph.D.**, Blue Brain Project, École Polytechnique Fédérale de Lausanne (EPFL), Switzerland, for assistance with the code base for the optimization workflow between the Blue Brain Project and the Allen Institute, consultation about optimization outcomes, and performing quality control assessment of the morphology diameter-representation for biophysical modeling – all active.
- **Felix Schuermann, Ph.D.**, Blue Brain Project, École Polytechnique Fédérale de Lausanne (EPFL), for contributions to optimization-algorithm development for biophysical modeling – all active.
- **Idan Segev, Ph.D.**, Hebrew University, Israel, for contributions to optimization-algorithm development for biophysical modeling – all active.
- **Werner van Geit, Ph.D.**, Blue Brain Project, École Polytechnique Fédérale de Lausanne (EPFL), Switzerland, for providing the code base for the optimization workflow between BBP and the Allen Institute, for executing optimizations, for consulting about the optimization outcomes, and setting up the final recipes used for biophysical modeling – all active.
- The BlueBrain IV BlueGene/Q system used to optimize the all-active models is financed by ETH Board Funding to the Blue Brain Project as a National Research Infrastructure and hosted at the Swiss National Supercomputing Center (CSCS).
- The software framework used to optimize the all active models was developed with support from the ETH Domain for the Blue Brain Project (BBP).

Christian Pozzorini Ph.D., École Polytechnique Fédérale de Lausanne, Brain Mind Institute, for advice in setting up the generalized leaky integrate and fire neuron model fitting tools.

Pierre Chambon, M.D., Ph.D., Institut de Génétique et de Biologie Moléculaire et Cellulaire (IGBMC/GIE-CERBM), for providing the CreERT2 and Cre-polyA DNA construct for transgenic mice production.

Charles Gerfen, Ph.D., National Institutes of Health, National Institute of Mental Health, for providing the Chrna2-Cre_OE25, Htr3a-Cre_NO152, Ntsr1-Cre_GN220, Rbp4-Cre_KL100, Sim1-Cre_KJ18, and Tlx3-Cre_PL56 mice via Mutant Mouse Regional Resource Centers (MMRRC) facility at University of California, Davis and the GENSAT project.

Marina Gertsenstein, Mount Sinai Hospital in Toronto, for providing the G4 (129/B6 F1 hybrid) and B6-C2 ES cell lines for transgenic mice production.

Wulfram Gerstner, Ph.D., École Polytechnique Fédérale de Lausanne, Brain Mind Institute, for advice in setting up the generalized leaky integrate and fire neuron model fitting tools.

Etay Hay, Ph.D., The Hebrew University of Jerusalem, for advice regarding optimization of biophysical models – perisomatic.

Nathaniel Heintz, Ph.D., HHMI, The Rockefeller University for providing the Chrna2-Cre_OE25, Htr3a-Cre_NO152, Ntsr1-Cre_GN220, Rbp4-Cre_KL100, Sim1-Cre_KJ18, and Tlx3-Cre_PL56 mice via MMRRC facility at University of California, Davis and the GENSAT project.

Michael Hines, Ph.D., Yale University, for assistance with the NEURON software.

Z. Josh Huang, Ph.D., Cold Spring Harbor Laboratory, for providing the Gad2-IRES-Cre, Nos1-CreERT2, Sst-IRES-Cre, and Vip-IRES-Cre mice via The Jackson Laboratory.

Bradford B. Lowell, M.D., Ph.D., Beth Israel Deaconess Medical Center (Harvard), for providing the Chat-IRES-Cre, Nr5a1-Cre, Slc17a6-IRES-Cre, and Slc32a1-IRES-Cre mice via The Jackson Laboratory.

David McCormick, Ph.D., Yale University, for advising on brain slice electrophysiology.

Ulrich Mueller, Ph.D., The Scripps Research Institute, for providing the Cux2-CreERT2 mice via The Jackson Laboratory.

Andras Nagy, Ph.D., Mount Sinai Hospital in Toronto, for providing the G4 (129/B6 F1 hybrid) and B6-C2 ES cell lines for transgenic mice production.

Zoran Popović, Ph.D., University of Washington, Dept. Of Computer Science and Engineering; UW Center for Game Science, for creating the Mozak custom user interface for the 3D reconstruction software, Terafly-Vaa3D.

Idan Segev, Ph.D., The Hebrew University of Jerusalem, for advice regarding optimization of biophysical models – perisomatic.

Mensi Skander Ph.D., École Polytechnique Fédérale de Lausanne, Brain Mind Institute, for advice in setting up the generalized leaky integrate and fire neuron model fitting tools.

Rafael Yuste, M.D., Ph.D., Columbia University, for advising on biocytin morphology reconstruction and providing sample slides that contributed to the development of the reconstruction process.

Covance Genomics Laboratory, Seattle subsidiary of LabCorp Group of Holdings, for providing RNA sequencing services.

EA Genomic Services, for providing RNA sequencing services.

Mutant Mouse Regional Resource Centers (MMRRC) Facility at University of California, Davis and University of Missouri, for providing various Cre mice as listed above (<http://www.mmrrc.org/>).

The Jackson Laboratory, for providing various transgenic mice as listed above (<http://jaxmice.jax.org>).
