

Allen Cell Types Database

ACKNOWLEDGEMENTS

The Allen Institute for Brain Science gratefully acknowledges the following contributors for their expertise and generous assistance with the creation of the Allen Cell Types Database.

FUNDING

We wish to thank the Allen Institute founders, Paul G. Allen and Jody Allen, for their vision, encouragement and support.

Some of the data generation and analysis from cells derived from mouse anterior lateral motor area (ALM) and lateral geniculate complex (LGd) single cell transcriptomics data was supported by award number U01MH105982 from the National Institute of Mental Health, and Eunice Kennedy Shriver National Institute of Child Health & Human Development. Its contents are solely the responsibility of the authors and do not necessarily represent the official views of National Institute of Mental Health and the National Institutes of Health.

COLLABORATORS AND OTHER CONTRIBUTORS

Human Tissue Procurement. This project includes experimental data acquired from cells originating from the adult human brain. Human brain tissue was analyzed from neurosurgical and postmortem sources and is available thanks to the generosity of the tissue donors, their families and through the efforts of the dedicated neurosurgeons, pathologists and colleagues who partner with us on this project.

- **Charles Cobbs, M.D.**, The Ben and Catherine Ivy Center for Advanced Brain Tumor Treatment, Swedish Neuroscience Institute, for providing neurosurgical tissue.
- **Richard G. Ellenbogen, M.D., F.A.C.S.**, Department of Neurological Surgery, University of Washington School of Medicine, for guidance, contribution and support of intraoperative tissue per Institutional Review Board (IRB).
- **Ryder P. Gwinn, M.D.**, Epilepsy Surgery and Functional Neurosurgery, Swedish Neuroscience Institute, for providing neurosurgical tissue.
- **Andrew L. Ko, M.D.**, Regional Epilepsy Center at Harborview Medical Center, Department of Neurological Surgery, University of Washington School of Medicine, for providing neurosurgical tissue.
- **Jonathan Lucas, M.D.**, Chief Medical Examiner, County of San Diego, for providing donated postmortem tissue.
- **Jeffrey G. Ojemann, M.D.**, Regional Epilepsy Center at Harborview Medical Center, Department of Neurological Surgery, University of Washington School of Medicine, for providing neurosurgical tissue.

- **C. Dirk Keene, M.D., Ph.D.**, Department of Pathology, University of Washington School of Medicine, for expert neuropathology consultation and assistance in establishing the logistics of neurosurgical tissue acquisition.
- **Carolyn Bea**, Harborview Medical Center, for coordination of human subjects protection at Harborview Medical Center.
- **Allison Beller**, Department of Pathology, University of Washington School of Medicine, for providing assistance with tissue collection, contracts, and IRB.
- **Gina DeNoble**, Harborview Medical Center, for project coordination at Harborview Medical Center.
- **Niki Ellington, RN**, Swedish Medical Center, for providing assistance with tissue collection in the operating room.
- **Tracie Granger, MSHS, CCRC**, Swedish Medical Center, for collaboration management at Swedish Medical Center.
- **Nathan Hansen**, Swedish Medical Center, for project coordination at Swedish Medical Center.
- **Parvinder Hothi, Ph.D.**, Swedish Medical Center, for project coordination at Swedish Medical Center.
- **Rachel Iverson**, Swedish Medical Center, for project coordination at Swedish Medical Center.
- **Matt Ormond**, Swedish Medical Center, for providing assistance with tissue collection.
- **Caryl Tongco**, Swedish Medical Center, for project coordination at Swedish Medical Center.
- **Jae-Guen Yoon**, Swedish Medical Center, for providing assistance with tissue collection.
- **Joe Davis, CTSS**, Office of the Medical Examiner, County of San Diego, for project coordination and tissue acquisition.

Silvia Arber, Ph.D., Friedrich Miescher Institute, for providing the Pvalb-IRES-Cre mice via The Jackson Laboratory.

The Blue Brain Project. The biophysical models with active dendrite conductances were developed in the context of a collaboration between the Allen Institute for Brain Science and the Blue Brain Project (<http://bluebrain.epfl.ch>). The Blue Brain Project contributed expertise, whole cell patch-clamp stimulation protocols, supercomputing time, data-driven modeling pipelines, source code for optimizing biophysical neuronal models, execution of optimizations, morphological analysis source code and quality control tests. The BlueBrain IV BlueGene/Q system used to optimize the all-active models is financed by ETH Board Funding to the Blue Brain Project as a National Research Infrastructure and hosted at the Swiss National Supercomputing Center (CSCS). The software framework used to optimize the all active models was developed with support from the ETH Domain for the Blue Brain Project (BBP). Specific contributors from the Blue Brain Project and its collaborators are listed below:

- **Henry Markram, Ph.D.**, Blue Brain Project, École Polytechnique Fédérale de Lausanne (EPFL), Switzerland, for consultation about optimization outcomes for biophysical modeling – all active.

- **Sean Hill, Ph.D.**, Blue Brain Project, EPFL, Switzerland, for advising on biophysical modeling – all active.
- **Eilif Muller, Ph.D.**, Blue Brain Project, EPFL, Switzerland, for consultations about optimization outcomes and contributions to morphology analyses for biophysical modeling – all active.
- **Etay Hay, Ph.D.**, The Hebrew University of Jerusalem, for providing code for optimization of biophysical neuronal models and advising on its application.
- **Shaul Druckmann, Ph.D.**, The Hebrew University of Jerusalem, for providing code for optimization of biophysical neuronal models and advising on its application.
- **Guy Atenekeng Kahou, Ph.D.**, Blue Brain Project, EPFL, Switzerland, for contributions to the single-neuron morphology analyses for biophysical modeling – all active.
- **Lida Kanari**, Blue Brain Project, EPFL, Switzerland, for contributions to the single-neuron morphology analyses for biophysical modeling – all active.
- **Christian Rossert, Ph.D.**, Blue Brain Project, EPFL, Switzerland, for assistance with the code base for the optimization workflow between the Blue Brain Project and the Allen Institute, consultation about optimization outcomes, and performing quality control assessment of the morphology diameter-representation for biophysical modeling – all active.
- **Felix Schuermann, Ph.D.**, Blue Brain Project, EPFL, for contributions to optimization-algorithm development for biophysical modeling – all active.
- **Idan Segev, Ph.D.**, Hebrew University, Israel, for contributions to optimization-algorithm development for biophysical modeling – all active.
- **Werner van Geit, Ph.D.**, Blue Brain Project, EPFL, Switzerland, for providing the code base for the optimization workflow between BBP and the Allen Institute, for executing optimizations, for consulting about the optimization outcomes, and setting up the final recipes used for biophysical modeling – all active.

Pierre Chambon, M.D., Ph.D., Institut de Génétique et de Biologie Moléculaire et Cellulaire (IGBMC/GIE-CERBM), for providing the CreERT2 and Cre-polyA DNA construct for transgenic mice production.

Karl Deisseroth, M.D., Ph.D., Stanford University, for providing pLenti-CaMKII-hChr2-EYFP-WPRE for transgenic mouse production.

Charles Gerfen, Ph.D., National Institutes of Health, National Institute of Mental Health, for providing the Chrna2-Cre_OE25, Chrb3-Cre_SM93, Glt25d2-Cre_NF107, Gng7-Cre_KH71, Htr3a-Cre_NO152, Ntsr1-Cre_GN220, Rbp4-Cre_KL100, Sim1-Cre_KJ18, Th-Cre_F1172, and Tlx3-Cre_PL56 mice via Mutant Mouse Regional Resource Centers (MMRRC) facility at University of California, Davis and the GENSAT project.

Marina Gertsenstein, Mount Sinai Hospital in Toronto, for providing the G4 (129/B6 F1 hybrid) and B6-C2 ES cell lines for transgenic mice production.

Wulfram Gerstner, Ph.D., EPFL, Brain Mind Institute, for advice in setting up the generalized leaky integrate and fire neuron model fitting tools.

Etay Hay, Ph.D., The Hebrew University of Jerusalem, for advice regarding optimization of biophysical models – perisomatic.

Nathaniel Heintz, Ph.D., HHMI, The Rockefeller University for providing the Chrna2-Cre_OE25, Chrn3-Cre_SM93, Glt25d2-Cre_NF107, Gng7-Cre_KH71, Htr3a-Cre_NO152, Ntsr1-Cre_GN220, Rbp4-Cre_KL100, Sim1-Cre_KJ18, Th-Cre_F1172, and Tlx3-Cre_PL56 mice via MMRRRC facility at University of California, Davis and the GENSAT project.

Michael Hines, Ph.D., Yale University, for assistance with the NEURON software.

Z. Josh Huang, Ph.D., Cold Spring Harbor Laboratory, for creating the Crh-IRES-Cre (ZJH), Etv1-CreERT2, Gad2-IRES-Cre, Nos1-CreERT2, Sst-IRES-Cre, SST-IRES-FlpO, and Vip-IRES-Cre mice, provided via The Jackson Laboratory.

J. Craig Venter Institute:

- **Brian Aeversmann**, for collaboration in creating the initial human single nuclei transcriptomics data set which informed how to establish a pipeline at the Allen Institute.
- **Francisco Diez-Fuertes, Ph.D.**, for collaboration in creating the initial human single nuclei transcriptomics data set which informed how to establish a pipeline at the Allen Institute.
- **Suguna Krishnaswami, Ph.D.**, for collaboration in creating the initial human single nuclei transcriptomics data set which informed how to establish a pipeline at the Allen Institute.
- **Roger Lasken, Ph.D.**, for collaboration in creating the initial human single nuclei transcriptomics data set which informed how to establish a pipeline at the Allen Institute.
- **Jamison McCarrison**, for collaboration in creating the initial human single nuclei transcriptomics data set which informed how to establish a pipeline at the Allen Institute.
- **Mark Novotny**, for collaboration in creating the initial human single nuclei transcriptomics data set which informed how to establish a pipeline at the Allen Institute.
- **Richard H. Scheuermann, Ph.D.**, for collaboration in creating the initial human single nuclei transcriptomics data set which informed how to establish a pipeline at the Allen Institute.
- **Nicholas Schork, Ph.D.**, for collaboration in creating the initial human single nuclei transcriptomics data set which informed how to establish a pipeline at the Allen Institute.
- **Danny Tran**, for collaboration in creating the initial human single nuclei transcriptomics data set which informed how to establish a pipeline at the Allen Institute.
- **Pratap Venepally, Ph.D.**, for collaboration in creating the initial human single nuclei transcriptomics data set which informed how to establish a pipeline at the Allen Institute.

Bradford B. Lowell, M.D., Ph.D., Beth Israel Deaconess Medical Center (Harvard), for providing the Chat-IRES-Cre, Nr5a1-Cre, Slc17a6-IRES-Cre, Sim1-Cre, and Slc32a1-IRES-Cre mice via The Jackson Laboratory.

Liqun Luo, Ph.D., Stanford University, for providing pRosa26-GG for transgenic mouse production.

David McCormick, Ph.D., Yale University, for advising on brain slice electrophysiology.

Ulrich Mueller, Ph.D., The Scripps Research Institute, for providing the Cux2-CreERT2 mice via The Jackson Laboratory.

Andras Nagy, Ph.D., Mount Sinai Hospital in Toronto, for providing the G4 (129/B6 F1 hybrid) and B6-C2 ES cell lines for transgenic mice production.

Zoran Popović, Ph.D., University of Washington, Dept. Of Computer Science and Engineering; UW Center for Game Science, for creating the Mozak custom user interface for the 3D reconstruction software, Terafly-Vaa3D.

Christian Pozzorini, Ph.D., École Polytechnique Fédérale de Lausanne, Brain Mind Institute, for advice in setting up the generalized leaky integrate and fire neuron model fitting tools.

Idan Segev, Ph.D., The Hebrew University of Jerusalem, for advice regarding optimization of biophysical models – perisomatic.

Mensi Skander, Ph.D., École Polytechnique Fédérale de Lausanne, Brain Mind Institute, for advice in setting up the generalized leaky integrate and fire neuron model fitting tools.

Philippe Soriano, Ph.D., Mount Sinai Hospital, for providing PGKneotpAlox2, pPGKFLPobpA, pPGKPhic31obp (sequence), Phi31-neo, and pFLPo-FLPo for transgenic mouse production.

Gábor Tamás, Ph.D., University of Szeged (Hungary), for assistance with training and input on early human in vitro single cell characterization pipeline development.

Roger Tsien, Ph.D., University of California, San Diego, for providing tdTomato for transgenic mouse production. **Rafael Yuste, M.D., Ph.D.**, Columbia University, for advising on biocytin morphology reconstruction and providing sample slides that contributed to the development of the reconstruction process.

Covance Genomics Laboratory, Seattle subsidiary of LabCorp Group of Holdings, for providing RNA sequencing services.

EA Genomic Services, for providing RNA sequencing services.

Mutant Mouse Regional Resource Centers (MMRRC) Facility at University of California, Davis and the University of Missouri, for providing various Cre mice as listed above (<https://www.mmrc.org/>).

The Broad Institute Genome Sequencing Platform, for providing RNA sequencing services.

The Jackson Laboratory, for providing transgenic mice listed above (<https://jaxmice.jax.org/>).

Finally, we would like to thank our [advisory council members and scientific advisory board members](#), past and present, for their guidance and support.
