

Documentation

Documentation: Allen Human Brain Atlas

Document	Description
Microarray Survey	Overview of methods for the microarray survey
Microarray Data Normalization	Description of normalization methods used for the microarray survey
In Situ Hybridization in the Human Brain Atlas	Overview of methods for ISH studies
Gene List	A complete list of genes characterized by ISH in adult human brain studies
Case Qualification and Donor Profiles	Summary of case qualification process and key information about each donor
Ontology and Nomenclature	Rationale and sources for the ontology and anatomic nomenclature
Microarray Platform Selection	Technical white paper comparing different microarray platform/service provider options
Acknowledgement of Funders	Recognition of those who provided financial support
Acknowledgement of Collaborators	Recognition of collaborators and others who provided assistance
